1. Introduction

The Department of Information Technology, Vignan's Institute of Management and Technology for Women, organized a Two-Week International Online Short-Term Training Program (STTP) titled "Intelligence Reimagined: A Journey from AI to GenAI Applications" in association with AIMERS from 15th September 2025 to 27th September 2025. The program aimed to enhance faculty members, researchers, and students' understanding of Artificial Intelligence (AI) and Generative AI (GenAI), covering foundational concepts, recent advancements, and hands-on applications.

2. Objectives of the STTP

- To provide an in-depth understanding of Artificial Intelligence and Generative AI.
- To expose participants to the latest tools, techniques, and frameworks in AI and Gen AI.
- To bridge the gap between classical AI and emerging generative AI technologies.
- To encourage interdisciplinary research and collaborative learning among participants.

3. Coordination Committee

Convener: Dr. D. Shanthi, Professor

Coordinators:

- A. Eenaja, Assistant Professor

Co-coordinators:

- A. Rajini Devi, Assistant Professor
- D. KousariKumari, Assistant Professor

4. No of Registrations

Total Registrations: 131

The STTP attracted participants from various academic institutions, industries, and research organizations, with active engagement in discussions, Q&A sessions, and hands-on workshops.

TOPIC: Introduction to AI and GenAI

Artificial Intelligence (AI) is the field of computer science that enables machines to perform tasks that typically require human intelligence, such as learning, reasoning, problem-solving, and decision-making. It encompasses techniques like machine learning, natural language processing, and computer vision to create intelligent systems.

Generative AI (GenAI) is an advanced branch of AI that focuses on creating new content — such as text, images, audio, or code — based on patterns learned from existing data. It leverages deep learning models like GPT and diffusion models to generate human-like and creative outputs. Together, AI and GenAI are transforming industries by automating processes, enhancing creativity, and enabling data-driven innovation.

DAY 2:

16-Sep-2025

Resource person: Mrs. Rhimjim, Assistant Professor, Dept of CSE,

Topic: Classical AI vs Generative AI: Concepts and Evolution

Classical AI vs Generative AI: Concepts and Evolution
Classical AI focuses on rule-based systems and logic-driven algorithms designed to mimic human reasoning and decision-making. It relies on predefined data, symbolic processing, and expert rules to solve specific problems. In contrast, Generative AI uses machine learning models—especially deep neural networks—to create new content such as text, images, code, or music by learning from large datasets. The evolution from Classical to Generative AI.

DAY 3:

17-Sep-2025

Resource person:

Dr. Ashwani Kumar

Associate Professor

School of Computer Science Engineering and Technology

Bennett University, Noida, UP

Topic: Machine Learning Algorithms for AI Systems

**VIGNAN'S INSTITUTE OF MANAGEMENT

(An Autonomous Institution)

[Sponsored by Lavu Educational Society, Affiliated to JNTU-H & Approved
Kondapur (V), Ghatkesar (M), Medchal - Malkajgiri (D) - 501 301. Phone: 96529 10002/3]

Machine Learning algorithms enable AI systems to learn patterns from data and make intelligent decisions without explicit programming. Key types include **supervised learning** (using labeled data for prediction), **unsupervised learning** (finding hidden patterns or clusters), and **reinforcement learning** (learning through feedback and rewards). These algorithms power applications Like image recognition, speech processing, recommendation systems, and autonomous decision-making.

DAY 4:

18-Sep-2025

Resource Person:

Dr. Vivek Tiwari

Head and Associate Professor

Associate Dean (Academics)

Department of CSE, ABV-Indian Institute of Information Technology & Management

Topic: Deep Learning for Vision and Language Applications

Deep Learning uses multi-layered neural networks to automatically learn complex patterns from large datasets. In **computer vision**, it enables tasks like image recognition, object detection, and facial recognition. In **natural language processing**, it powers applications such as speech recognition, language translation, and text generation. These advancements have greatly improved the accuracy and efficiency of AI-driven vision and language system

DAY 5:19.09.2025

Resource person:

Dr.GSuryanarayana,

Associate Professor & i/c HoD

Department CSE,Symbiosis Institute of Technology, Hyderabad Campus,

Topic:Introduction to Large Language Models (LLMs)

Large Language Models (LLMs) Large Language Models are advanced AI systems trained on massive text datasets to understand, generate, and process human language. They use deep learning architectures like transformers to perform tasks such as text generation,

summarization, translation, and question answering. LLMs, such as GPT and BERT, have revolutionized natural language understanding and communication in AI applications.

DAY 6: 20.09.2025

Resource person:Dr. PrasanalakshmiBalaji, Research Professor, Department of Computer Science, College of Computer Science, King Khalid University, Abha, Saudi Arabia

Topic:Prompt Engineering for GenAI

Prompt Engineering is the technique of designing and optimizing input prompts to effectively guide Generative AI models in producing desired outputs. It involves crafting clear, specific, and contextual instructions that help models like GPT generate accurate, relevant, and creative responses. This skill is essential for improving the performance and reliability of GenAI applications.

The screenshot shows a Google Meet interface. The main window displays a presentation slide titled "Prompting Best Practices" with the following bullet points:

- Clearly communicate what content or information is most important.
- Structure the prompt: Start by defining its role, give context/input data, then provide the instruction.
- Use specific, varied examples to help the model narrow its focus and generate more accurate results.
- Use constraints to limit the scope of the model's output. This can help avoid meandering away from the instructions into factual inaccuracies.
- Break down complex tasks into a sequence of simpler prompts.
- Instruct the model to evaluate or check its own responses before producing them. ("Make sure to limit your response to 3 sentences", "Rate your work on a scale of 1-10 for conciseness", "Do you think this is correct?")

On the right side, there is a "Participants" list with the following names:

Below the title, the authors are listed: Ashish Vaswani, Noam Shazeer, Niki Parmar, Jakob Uszkoreit, Llion Jones, Aidan N. Gomez, and Łukasz Kaiser. The paper is from Google Research. A link to the paper is provided: <https://arxiv.org/abs/1706.03762>. The paper is described as introducing the Transformer, a model based only on self-attention (no RNNs or CNNs), making it faster and more parallelizable. It achieves state-of-the-art results in translation (English-German and English-French) at lower training costs. With key ideas like multi-head attention, positional encoding, and residuals, it also generalizes well to other tasks like parsing.

Retrieval-Augmented Generation (RAG) combines information retrieval with generative AI to produce more accurate and context-aware responses. It uses vector databases to store and retrieve semantic embeddings—numerical representations of text—to find relevant information efficiently. By integrating retrieved data into the generation process, RAG enhances factual accuracy and reduces hallucinations in AI outputs.

Building AI agents involves combining powerful frameworks like LangChain and Hugging Face to create intelligent, context-aware systems. LangChain enables agents to connect language models with external data sources, tools, and APIs for dynamic reasoning and decision-making. Hugging Face provides pre-trained models and transformers that handle tasks like text generation, summarization, and question answering. Together, they enable developers to build modular, efficient, and customizable AI agents capable of performing complex real-world tasks autonomously.

Recent research trends in AI and Generative AI (GenAI) highlight rapid advancements and widespread adoption across industries. Generative AI has seen significant growth in usage and investment, particularly in large language models and multimodal systems that handle text, images, and speech. In education, GenAI is being integrated for tasks like code generation, personalized feedback, and learning assistance, reshaping teaching practices. Simultaneously, research emphasizes developing standards for safety, trustworthiness, and ethical deployment, while modeling the societal and economic impacts of AI to guide responsible adoption. These trends underscore the transformative potential of AI and GenAI, demanding continued innovation and careful governance.

DAY 12:27.09.2025

Resource Person:

Dr.S.Nagender Kumar, Professor, School of Computer and Information Sciences, University of Hyderabad

Topic:Applications of GenAI in Healthcare and Education

Generative AI is transforming healthcare and education by enhancing efficiency and personalization. In healthcare, it aids in medical imaging and diagnostics, accelerates drug discovery, provides virtual health assistants, and automates clinical documentation. In education, GenAI supports personalized learning, offers AI tutoring and instant feedback, generates interactive content, and assists with writing and language skills. These applications

improve decision-making, optimize workflows, and create tailored experiences for patients and learners, highlighting the transformative potential of GenAI

Assessment, Valedictory, and Feedback

1. Assessment

Participants were assessed through google form:

<https://forms.gle/ucbEfK8XcmEgeTpZA>

*Quizzes: Evaluating understanding of AI and Generative AI concepts, algorithms, and applications.

Participation:

Active involvement in live sessions, discussions, and Q&A.

Application of learned concepts to real-world AI or GenAI problems, demonstrating practical knowledge and problem-solving skills.

Assessment outcomes reflected the participants' comprehension, engagement, and ability to apply AI and GenAI principles effectively

2. Valedictory Session

Day 3 :

Dr. Ashwani Kumar
Associate Professor
School of Computer Science Engineering and
Technology, Benette University

* The valedictory session marked the successful completion of the STTP.

* Certificates of participation were distributed to all attendees.

* The resource person and participants shared experiences, key takeaways, and learning outcomes from the program.

* Appreciation was extended to organizers, resource persons, and participants for their contributions.

3. Feedback

<https://forms.gle/ebEhPLvZ1UCYyNVd6>

- Participants provided feedback on content, delivery, and overall learning experience.
- Key highlights from feedback included:
- Clarity of concepts in AI and GenAI.
- Practical demonstrations and examples were helpful.
- Interactive sessions and discussions enhanced understanding.
- Suggestions for longer hands-on sessions and additional case studies were noted.

The feedback will help improve future STTPs and ensure continued relevance and effectiveness of the training.

6 Key Highlights and Outcomes

The STTP successfully provided comprehensive exposure to the latest AI and GenAI technologies. Participants gained hands-on experience in prompt engineering, large language models, and applications of GenAI in various domains like healthcare and education. The event fostered collaboration and motivated participants to integrate AI and GenAI concepts in their teaching and research practices.

7 Feedback Summary

Participants expressed positive feedback regarding the relevance of topics, quality of resource persons, and practical exposure. The average satisfaction rating was above 90%, highlighting the effectiveness of the program.

8. Course Outcomes (COs):

By the end of this STTP, participants will be able to:

CO1: Understand the fundamental concepts and evolution of Artificial Intelligence (AI), Machine Learning (ML), and Deep Learning (DL), leading to Generative AI GenAI).

CO2: Demonstrate knowledge of key AI algorithms and generative models such as GPT, DALL-E, BERT, Stable Diffusion, and others.

CO3: Apply AI and GenAI techniques in solving real-world problems across domains such as healthcare, education, finance, design, and software development.

CO4: Utilize tools and platforms (e.g., Python, TensorFlow, Hugging Face, OpenAI APIs) to build and deploy intelligent applications.

CO5: Analyze ethical, legal, and societal implications of using GenAI technologies in various sector
